

BETESE Cash Desk — Staff Guide

How to sell credit to a customer and how to pay out a withdrawal (with codes). Gambia · currency GMD.

IMPORTANT — read first

Only an **ADMIN** can authorise the cash desk. Cash operations (+ Cash / – Cash) are turned **OFF** by default. Before any agent or marketer can sell credit or pay withdrawals, an admin must first **enable the cash desk** for that specific account.

A marketer must be set up as an **agent account** for this to apply — the cash desk is granted per agent account, not to a separate marketer role.

Exact admin path: Admin → **Agents** → find the agent's row → click the “**Cash desk off**” button so it becomes “**Cash desk on**” (turns amber). If an agent does not see the + Cash / – Cash buttons, it has not been enabled yet.

Two different codes — do not confuse them

1. Customer's code (OTP): a one-time code sent to the **customer's phone**. The customer reads it to you; you type it in to authorise. **Every** deposit and withdrawal needs this.

2. Withdrawal code: a receipt code the app gives **you** after a payout (looks like PLAYERID-XXXXXX). Keep it for your office records.

A. SELL CREDIT to a customer (+ Cash)

Customer hands you physical cash; you credit their wallet. This does NOT use your commission balance.

1. Open **Agent** → **My Customers**.
2. Find the customer (search by name, phone, or Player ID).
3. In the **Action** column click **+ Cash** (green). (No + Cash button = cash desk not enabled — ask admin.)
4. Enter the **Amount (GMD)**.
5. Click **Send code to customer** — a code is texted to the customer's phone.
6. Customer reads you the code → type it in “**Code from customer**” → click **Verify code**.
7. When it shows “**Customer authorised by OTP**”, click **Record cash deposit**.
8. Done — the wallet is credited immediately.

Alternative — Float button: sells credit from **your own agent balance** instead of physical cash. Same OTP steps, then click **Deposit**.

B. WITHDRAW / pay out a customer (– Cash)

You pay the customer cash from the shop; their wallet is debited and the app gives **you** a withdrawal code.

1. Open **Agent** → **My Customers** and find the customer.
2. Click – **Cash** (amber) in the Action column.
3. Enter the **Amount (GMD)** — it must not exceed the customer's balance.
4. Click **Send code to customer** → code goes to the customer's phone.
5. Customer reads you the code → type it in “**Code from customer**” → click **Verify code**.
6. After “**Customer authorised**”, click **Pay cash & get code**.
7. The app shows a **Withdrawal code** like AB1234-K7PQRS. Pay the customer their cash, and **keep this code** for your office records. Click **Done**.

Key rules

- The customer must have a **phone number on file**, or no code can be sent.
- **No transaction** can be completed without verifying the customer's OTP first — this is the fraud protection.
- **+ Cash / – Cash** only appear after an admin clicks “**Cash desk off**” → “**Cash desk on**” on **Admin** → **Agents** for that agent/marketer account.
- Withdrawal amount cannot be more than the customer's balance.
- Admins can do the same on **Admin** → **Customers** for any customer (no cash-desk gate).
